

Internet Programming Practice 11

Junhee Seok, Ph.D.
Assistant Professor
School of Electrical Engineering
Korea University, Seoul, Korea

Database Browser

- While a user can investigate data in a DBMS with a console application, it is not convenient for non-experts. To help them, there are many fancy tools. In this practice, you will make a simple web application to browse 'city' table of 'world' database with PHP, but only for Korean cities.
- Here are specifications. Please complete one-by-one.
 - 1. Your application should show cities as a table.
 - 2. The application should provide searching for city name (can you also include partial matching?).
- You are required to complete the practice within the class. It is ok even though you are not able to complete all specifications.
- Once you are done, please ask the lecturer or TA to check your practice, and submit Assignments and Test in blackboard.
