Internet Programming Practice 13

Junhee Seok, Ph.D.

Assistant Professor

School of Electrical Engineering

Korea University, Seoul, Korea

Simple DBMS Web Application

- In this practice, you will build a more completed but still simple DBMS web application. Please create and use a dummy database.

- Your application should be able to

  - 1. Show all tables of the dummy database

  - 2. Show data elements of a selected table

  - 3. Provide a tool to create a new table with any number of columns. Assume that only char(128), integer, and double are supported data types.

  - 4. Provide a tool to insert and delete elements of a selected table. You can use or modify the code of the last week.

- You are required to complete the practice within the class. It is ok even though you are not able to complete all specifications.

- Once you are done, please ask the lecturer or TA to check your practice, and submit Assignments and Test in blackboard.
