Internet Programming Practice 10

Junhee Seok, Ph.D.

Assistant Professor

School of Electrical Engineering

Korea University, Seoul, Korea

Calculator with GUI 2

- Your task is to implement a calculator with GUI in HTML, Javascript and PHP. It will be similar to what you have done several weeks ago.
  - The overall design should be done with HTML and CSS. The calculator should have a equation panel and a result panel.
  - Clicking number and operator buttons should change the value on the equation panel, which can be implemented by Javascript.
  - When you click '=' button, the value on the equation panel should be sent to your web server and proper result should be calculated in PHP and shown in the result panel of the response HTML document.
    - The form action of your document may need to indicate itself. For such self-calling, please see the example of Lecture Note 11.

- You are required to complete the practice within the class.
- Once you are done, please ask the lecturer or TA to check your practice, and submit Assignments and Test in blackboard.
